Práctica 4

Rocío Sánchez Cerván 2º A Ingeniería Informática

25 de diciembre de 2022

Activities

1. Create the simplest WHILE program that computes the *diverge* function (with zero arguments) and compute the codification of its code.

Código función divergente:

```
X_2 := X_1 + 1;

while X_2 \neq 0 do

X_1 := 0

od
```

Codificación del código:

```
code2N(X2 := X1 + 1; while \ X2 \neq 0 \ do \ X1 := 0 \ od) = = \Gamma(sent2N(X2 := X1 + 1), \ sent2N(while \ X2 \neq 0 \ do \ X1 := 0) = = \Gamma(7, \ 9) = \sigma_1^2(1, \ \sigma_1^2(7, 9)) = \sigma_1^2(1, 145)) = \frac{146 \times 147}{2} + 145 = 10876
```

Nota:

```
\begin{split} sent2N(X2:=X1+1) &= 5 \times \sigma_1^2(1,0) + 2 = 7 \\ sent2N(while~X2 \neq 0~do~X1:=0) &= 5 \times \sigma_1^2(1,code2N(X1:=0)) + 4 = \\ &= 5 \times \sigma_1^2(1,0) + 4 = 9 \\ code2N(X1:=0) &= \Gamma(sent2N(X1:=0)) - 1 = \sigma_1^2(0,sent2N(X1:=0)) + 1 - 1 = \\ &= \sigma_1^2(0,0) = 0 \end{split}
```

2. Create an Octave script that enumerates all the vectors.

```
function printVectors()
i=0;
while (i>=0)
  disp(['(' num2str(godeldecoding(i)) ')'])
  i=i+1;
endwhile
end
```

Ejemplo de ejecución en Octave:

```
alumno@TALF: -/talfuma/software/Whilelanguage/encoding

```

3. Create an Octave script that enumerates all the WHILE programs.

```
function printWhile()
i=0;
while (i>=0)
  disp(N2WHILE(i))
  i=i+1;
endwhile
end
```

Ejemplo de ejecución en Octave:

```
alumno@TALF: ~/talfuma/software/Whilelanguage/encoding
